Adobe Photoshop CS3

Everyone in web design needs Photoshop. I currently have Photoshop CS2 and have not gotten around to the upgrade yet but will soon because once again they have added some great features.

I started out using Paintshop Pro which for the money is a good software but cannot compare to everything you can do with Adobe Photoshop.

I will be adding many more tutorials to help you get familiar with this software. It will take time to get thru all the features but the tutorials help getting you familiar with these features and then you will find you cannot live without them.
